Stem Cell Banking In India - Preservation And Its Benefits

Every cell or organ has a specific characteristic; likewise, stem cells are regenerative medicine in our body as these cells are transplanted to different parts of the body to cure diseases or decrease effect on our body.

Stem cell Banking In India

Stem Cell Banking in India

UPDATED: 30 JUN 2022 1:35 PM

Stem cells are the first-born cells of the human body. These cells treat injury and diseases related to blood, bone, and cancer. When a child is born inside the womb, stem cells are first born, and then these cells get regenerated to produce new organs and the whole body. These cells are later used to cure the injury and renew the damaged part.

Every cell or organ has a specific characteristic; likewise, stem cells are regenerative medicine in our body as these cells are transplanted to different parts of the body to cure diseases or decrease effect on our body.

Can we preserve stem cells?
 Yes, we can preserve stem cells. This storage of cells is known as stem cell banking. These stem cells, also known as cord blood preservation, are carried out to save the excellent stem cells for future use for the treatments if necessary. These banks store cells at a low temperature so that they are not contaminated or degenerated.

Stem cell storage costs around \$1000 – \$2500 plus a storage fee of more than \$ 100 a year until the period of storing cord blood cells. You can store or donate your stem cells till the age of 35 for treatment of various diseases. Stem cell Treatment can be performed by certified Stem Cell Hospitals only.

How are stem cells being used today?
 Stem cells or umbilical cord blood cells in our body are used during stem cell transplants. These transplants are carried out for diseases related to bone-like cerebral palsy, leukaemia, lymphoma, neuroblastoma, different myeloma, cancer treatments like radiation or chemotherapy, or head or spine injury. These stem cells or umbilical blood cords are used to treat such therapies.

So, let us check where we can find stem cells other than our body, where they are stored in India, or where we can store our stem cells or umbilical cord blood units in India.

 - Novacord has become one of India's best and leading stem cell preservation facility providers.
 - Novacord is DCGI accredited organization.
 - Novacord stores and researches stem cell or umbilical cord blood units for treating you in advanced stem cell treatments.

Stem cell preservation helps you in treating life-threatening diseases if you come in contact with future treatments related to cancer, blood, and bone-related diseases. Preserving your stem cell now can protect your future as it is very difficult to match with other stem cell owners. Also, the cost of Stem Cell Therapy differs a lot in both the scenarios.

These are the main reasons for the rise in awareness for stem cell preservation. Don't delay any more; contact your nearest stem cell bank and save your life as well as the lives of your loved ones.
